

ABSTRACT OF THE DISCLOSURE

A single-service package coupling and valve includes a fitment having a spout and a sliding tubular valve member mounted therein for receiving a cooperating dispensing connector of a liquid distributing and dispensing system, and an external adapter ring designed to cooperate with the mounting mechanisms of a plurality of conventional commercially available dispensing connectors. An internal adapter sleeve is mounted within the sliding tubular valve member to provide a tight seal with any of the conventional dispensing connectors. The external adapter ring is provided with a pair of radially extending flanges adapted to accept and position different dispensing connectors. At least one of the radially extending flanges is provided with at least two wings to engage a threaded mounting collar of a service line connector.
